

Portable

Compact security agents are quick to deploy and will identify persons or vehicles, plus give warnings based on your exact parameters.

Cost-Effective

A cost-effective solution for hard-to-staff multi-guard sites or areas without permanent video surveillance. S3s extend coverage while reducing reliance on additional guard staffing.

Smart

AI-driven analytics designed to distinguish normal site activity from unauthorized presence within restricted areas.

Smart Sentry Stations

S3s specialize in human sensing, perimeter crossing and appearance-based alarms, even license plate recognition.

S3s deliver automated recorded messages and enable two-way communication to actively deter and engage unauthorized activity.

S3s are powerful, adaptable, enduring and programmable. They are all-seeing, detail-oriented and responsive.

S3s provide 360-degree coverage, 24/7, wherever they are stationed.

Deployment examples include: warehouses, corporate buildings, small businesses, construction sites, parks, satellite plants, HOAs/communities, swimming pools and more.

When public safety requirements began shifting rapidly a few years ago, Vet-Sec Protection Agency faced a challenge: how to keep people and sites secure with fewer personnel and new constraints. It wasn't the first time military-trained professionals had to move fast and build a reliable solution. We partnered with top engineering and manufacturing teams to create the **S3: Smart Sentry Station**.

Each S3 is a rugged, portable surveillance platform designed to extend your team's reach. They identify objects and events, sending instant alerts based on your custom rules and unusual-activity detection. Vet-Sec's cloud-based AI video management system (VMS) uses integrated learning to continuously improve performance over time.

Built to address immediate security needs while strengthening daily security operations, the S3 platform has evolved through years of real-world deployments and continuous refinement. Vet-Sec's ongoing R&D shapes what these systems can deliver —24/7. Today, the S3 lineup includes three purpose-built models to meet client needs.

S3 Technical Specifications & Features

- Three available models (unit sizes) so you can choose the best fit for your needs and location(s).
- Solar connections and charging for 400+ watts
- Extended battery booster connection for up to 7 days of battery life with no solar
- Plugin available for 110v power options
- Local Wi-Fi or cellular connectivity
- Cloud-managed data; no software to install
- Remote monitoring for power and network stability status
- Cameras: over 13 million pixels covering 360-degree panoramic views
- Security LEDs with multiple on settings, AI triggered for specific events/actions
- Human detection, human line crossing and appearance-based alarms
- License plate recognition (LPR)
- Vehicle identification by type (car, truck, bus, motorcycle, etc.)
- Customizable recorded messages for specific events/actions
- Heat mapping
- Optional visitor management
- Optional access control
- Optional VOIP/SIP integration

S3 100 Series

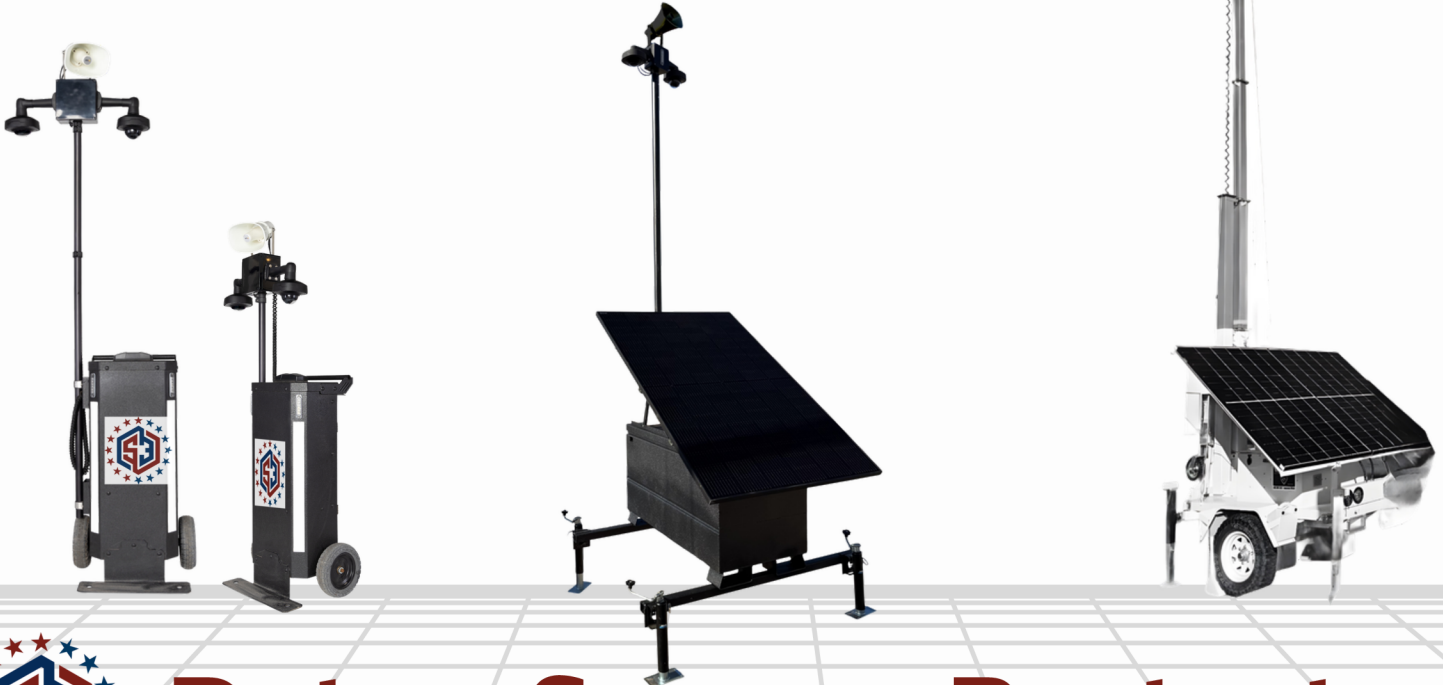

- 8'-9' tall mast
- 2' x 1.5' footprint
- 100 lbs; quick and flexible configuration
- Solar panels not attached

S3 200 Series

- 14'-20' tall mast
- 4' x 4' footprint
- Starlink connectivity enabled
- Solar panels built on unit; no additional space required

S3 300 Series

- 20'-25' tall mast
- 6' x 8' footprint
- Solar panels built on unit
- Ideal deterrent in parks, parking lots, etc.

Deter. Secure. Protect.
